

## With Perspective...

- ▶ **Standardize** the incident reporting and investigation management process.
- ▶ **Consolidate data and reporting** to present a complete picture of your organization's security risks.
- ▶ **Provide a real time view** of incident activity and its consequences.
- ▶ **Reduce the risk of litigation** with accurate and consistent incident documentation.
- ▶ **Ensure that investigations are managed** to result in recoveries and corrective action.
- ▶ **Deliver immediate answers** to critical questions.
- ▶ **Spot trends** and identify where preventative measures can make a difference.
- ▶ **Generate statistical reports** to illustrate the effectiveness of your security operation.
- ▶ **Report incident risk and consequence** in a quantitative way to senior management.
- ▶ **Ensure the best allocation** of security personnel, systems and resources.
- ▶ **Validate, substantiate and quantify decisions** that optimize corporate security's performance.
- ▶ **Support compliance requirements.**

# Perspective™

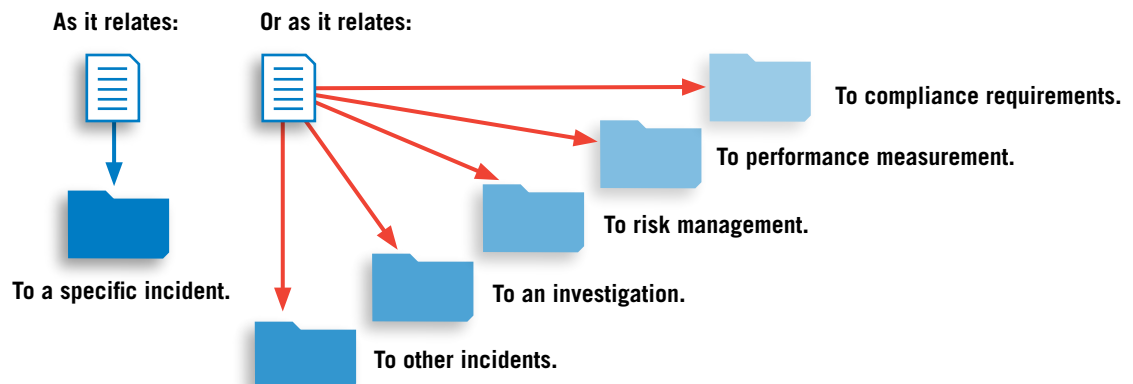

New from PPM 2000

## Incident management from every angle.

Focus on a single incident... or look at the big picture to spot trends, assess risk and manage performance.

### With Perspective™, you can view your incident data:

## With Perspective, you have access to a single enterprise platform to capture and report data relative to incidents, investigations and exposure.

### Incident management from every angle.

You can intelligently action and query your Perspective data for **trending, risk mitigation and planning activities**. Then, with the ability to accurately assess what is happening and its potential impact, you can make informed decisions that optimize performance and illustrate the effectiveness of your security operation.

With Perspective, you can **enter and interactively manage incidents and investigations** from beginning to end, including a complete sign off and review process. Interactive user dashboards and integration with Microsoft® Outlook encourage collaboration, and procedural consistency is emphasized through well-designed incident and investigation workflow.

**Multilevel information containment** provides a high level of information security and gives you the flexibility to segregate and consolidate vast amounts of data (by location, by department, etc.).

For statistical reporting, you can perform **custom analytical searching**, together with advanced charting and graphing. You can search on any information in your database, and you can present your findings in a variety of ways.

With Perspective, you can **access your system from anywhere, at anytime**. Its smart client technology means that you can log in remotely without compromising your system security and the confidentiality of your incident and investigation data.

### Add-On Modules

**Visual Analysis:** Bring clarity to complex investigations and scenarios by mapping relationships between seemingly disparate data. Perspective's Visual Analysis Module transforms routine data into visual elements that can easily be analyzed and interpreted. Developed in partnership with i2, Inc.

**e-Reporting:** Take advantage of your employees' willingness to report specific incidents, or even suspicious activity. With Perspective's e-Reporting Module, an electronic incident form is provided over your company's Intranet and "accepted" incidents move directly into Perspective. The e-Reporting Module saves data entry time, accelerates the investigative process and promotes your commitment to a safe and secure workplace.

**Performance Management:** Improve decision-making and increase accountability by monitoring incident activity against established benchmarks and key performance indicators. Perspective's Performance Management Module offers true insight, right from the individual incident all the way to the aggregated trend information on incidents and incident reduction programs. Developed in partnership with Performancesoft, Inc.

## Setting the Standard for Incident & Investigation Management

### What Makes Perspective Unique

Most Incident Reporting systems focus on data entry... and Perspective covers that. It also adds Investigation Management together with in-depth statistical analysis and incredible customizability. You can focus on a single incident... or you can look at the big picture. It's about Incident Management from every angle... it's about putting your incident activity in Perspective.

**The Technology:** Perspective was built on the .NET Framework using smart client technology. It is a centrally managed Web services application that will be easy to deploy, update and maintain throughout the enterprise and across multiple sites.
